

iXO SYSTEM #1

User Supplied Administrative PC

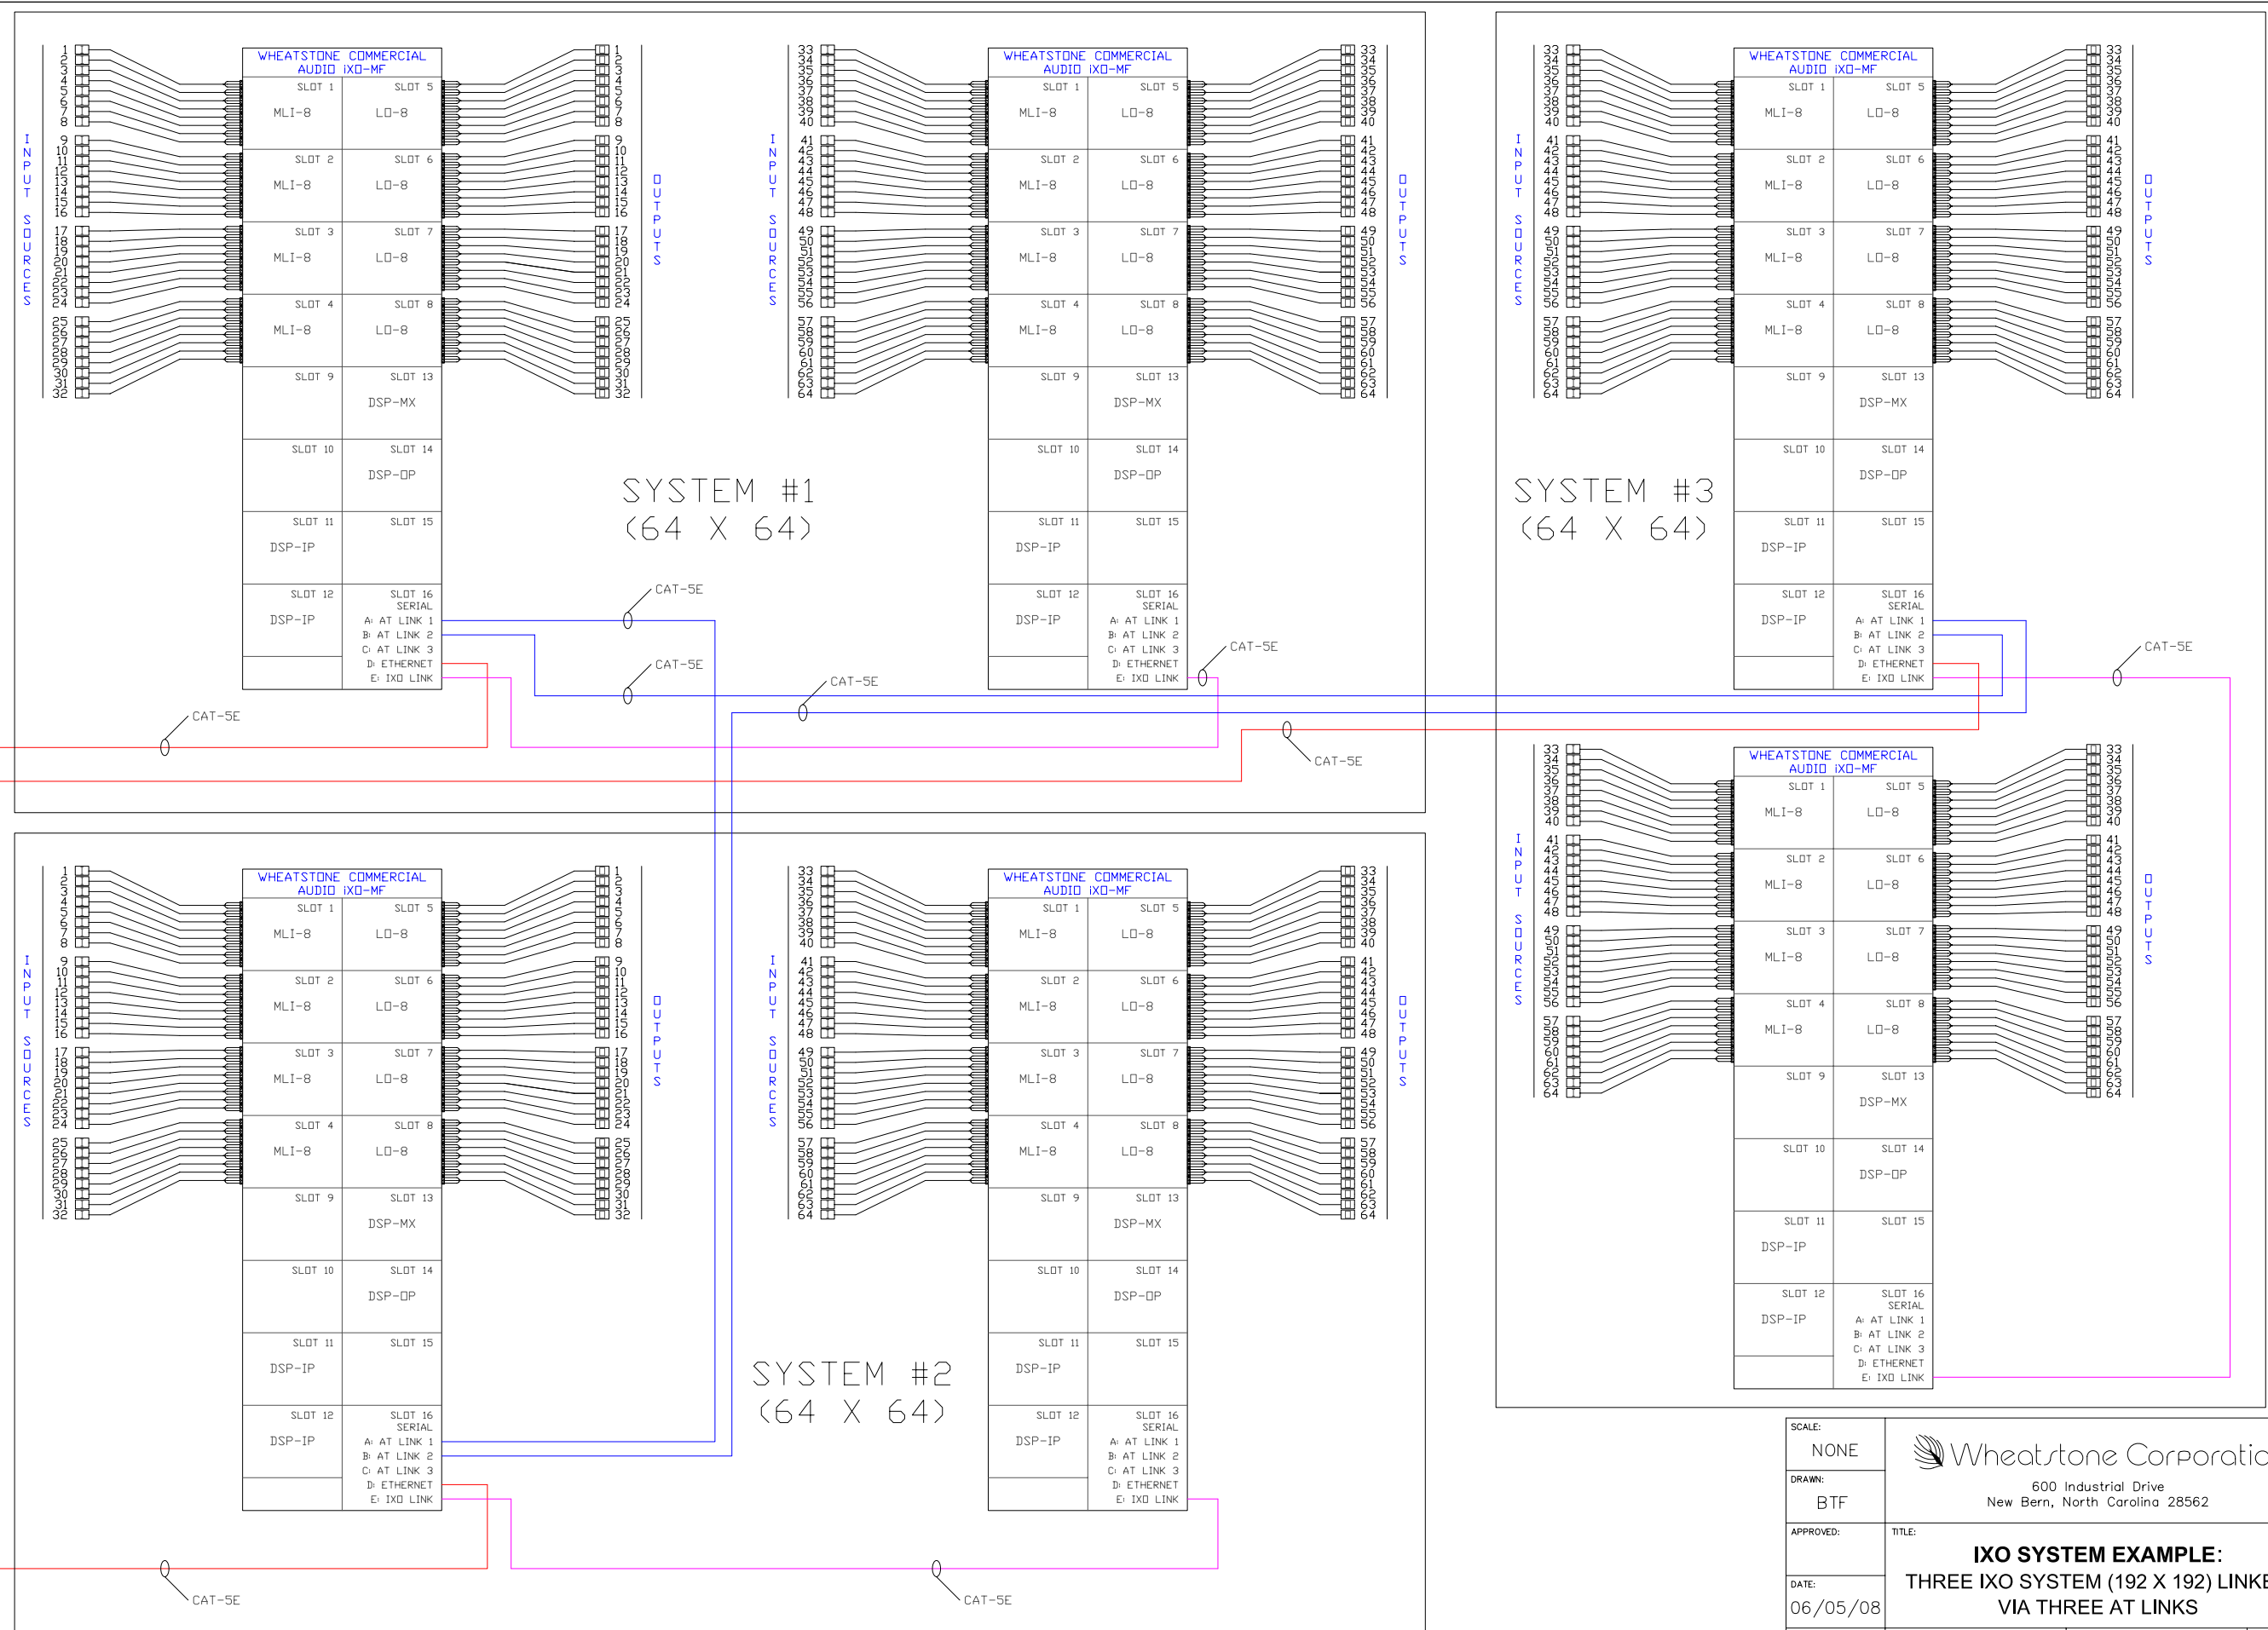

ETHERNET

Three iXO Systems (192 x 192) Linked Via Three AT Links

The system drawing illustrates the connections required for connecting three iXO systems together, creating a system with a total of 192 inputs and 192 outputs.

Three AT CAT-5E crossover cables connect the three systems, allowing 64 channels from each system to be available as a source for the other two. The system software application iXOverture allows you to select which signals will be made available for use by other systems.
